

Mio v0.1.1: Finding Our Voice Everywhere

**Media via SSE
Event Stream**

No polling.
No separate API calls.
Server pushes URL
directly through the
text connection.

CSS keyframes
staggered by
100ms

**Full Web &
Telegram
Parity**

Voice and selfies
now work natively
everywhere.

Look Before You Send: Two-Phase Uploads

Select files natively in the web client.

Delete imperfect selfies before they upload.

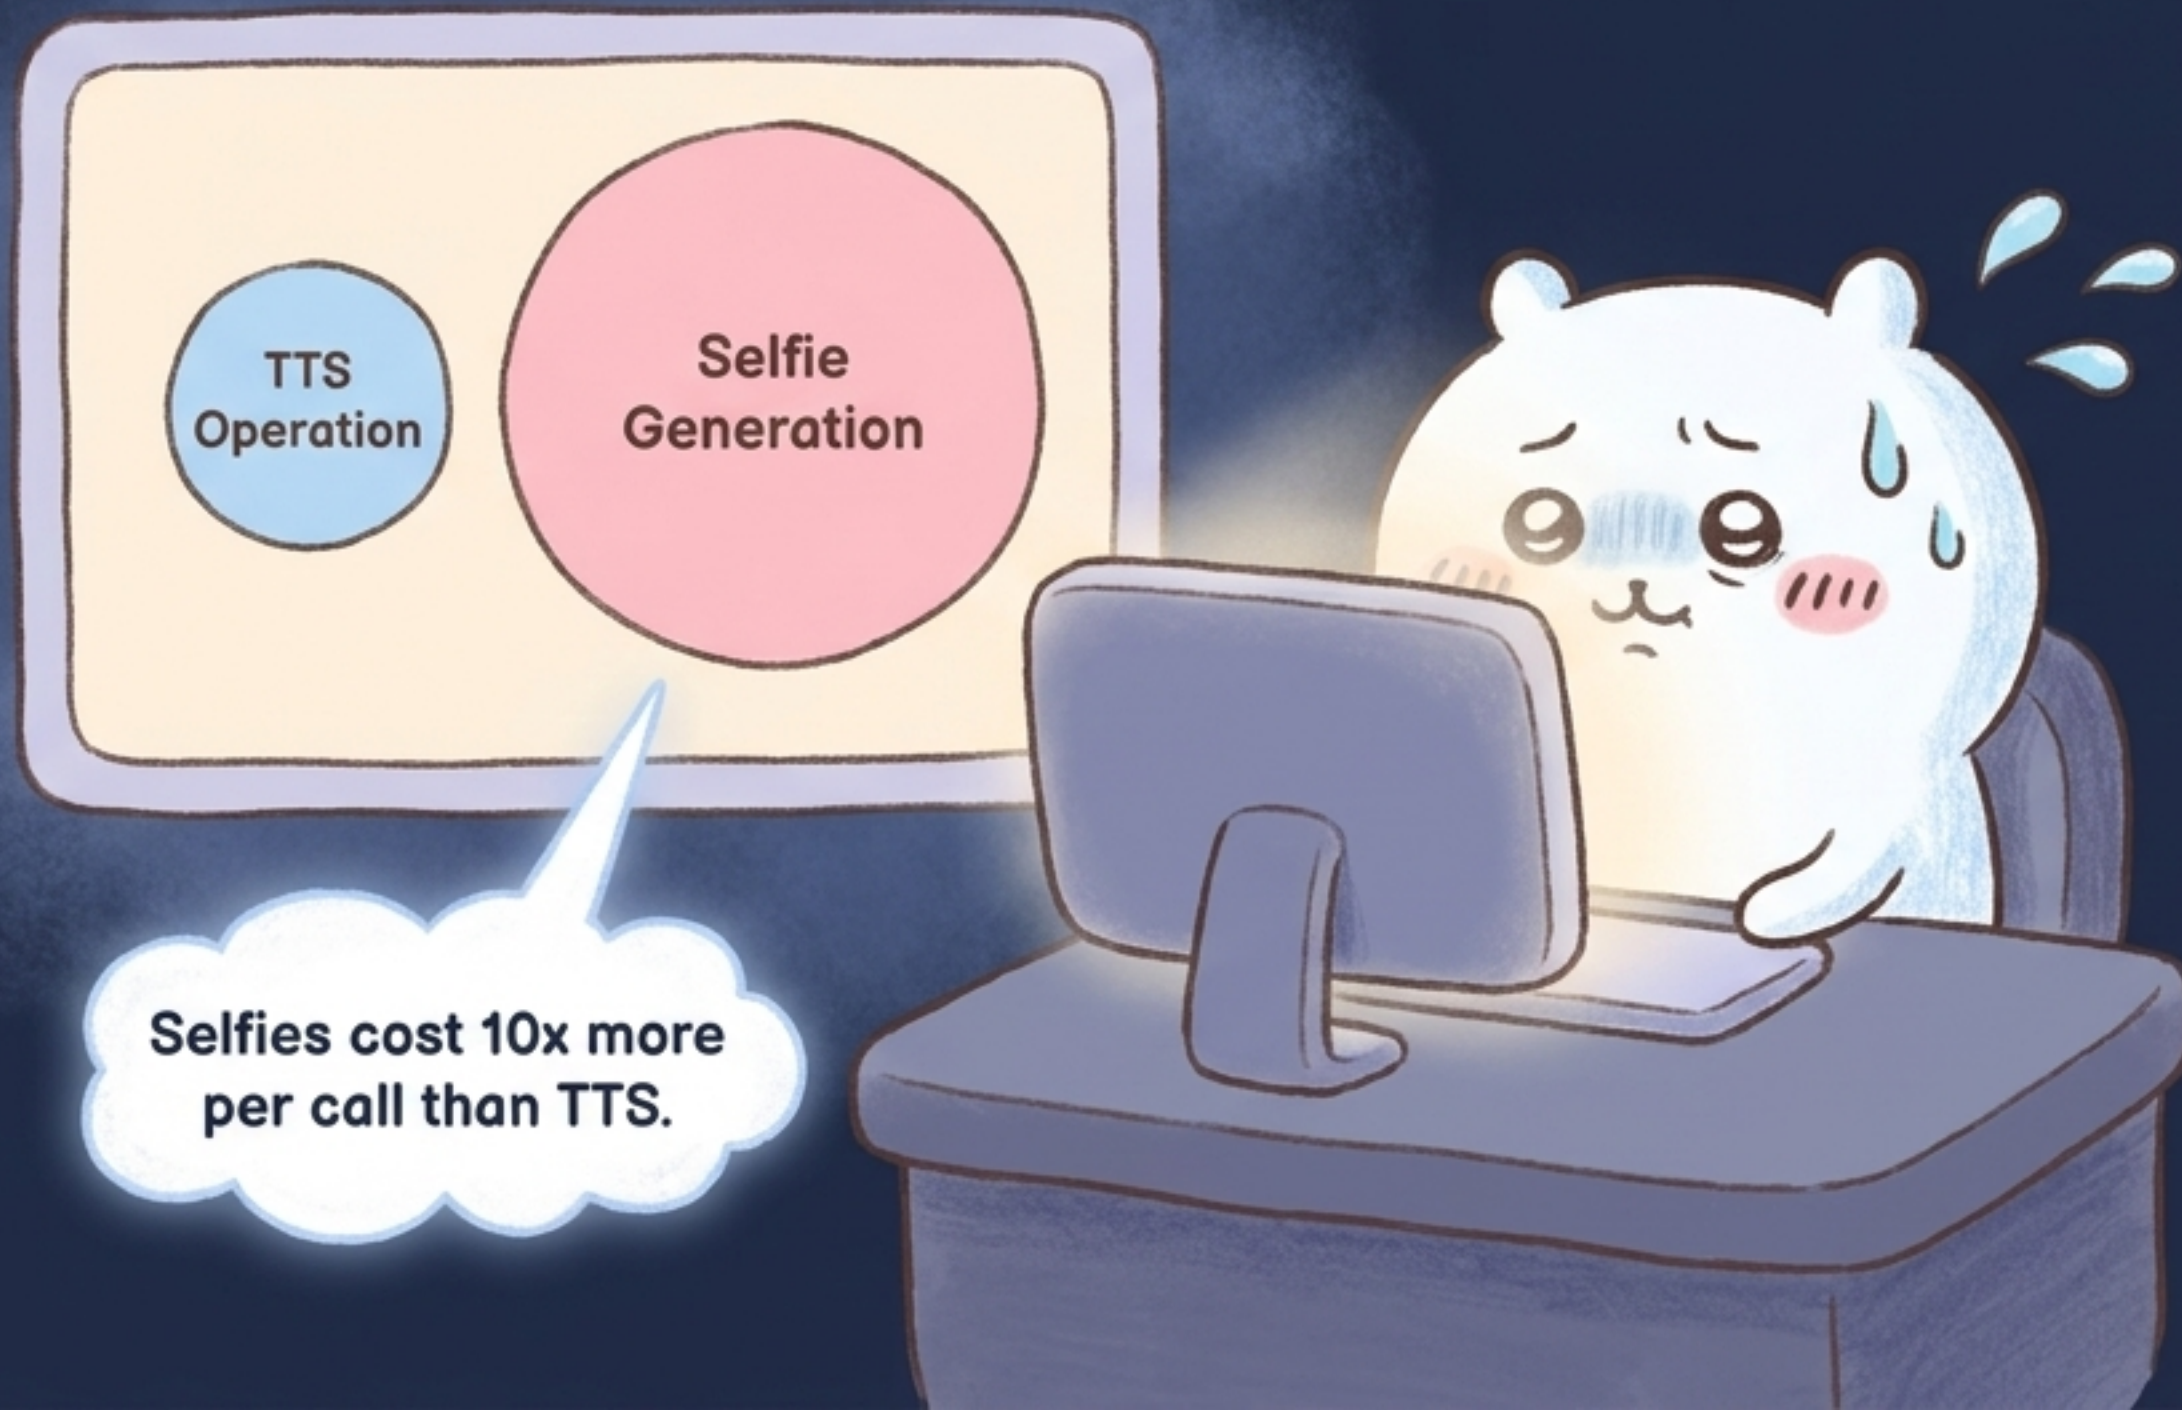

Two-Phase Protection

Images only upload when you hit send. No accidental sharing.
Rendered inline without intrusive lightboxes.

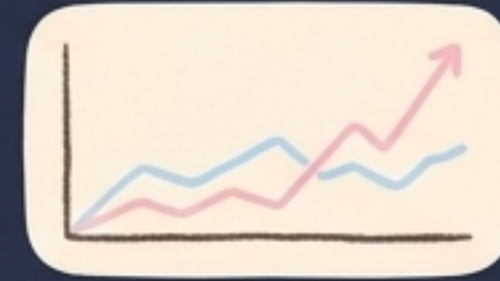

Contextual Magic: 3-Step Dynamic Onboarding

The Reality of Running AI: The Cost Dashboard

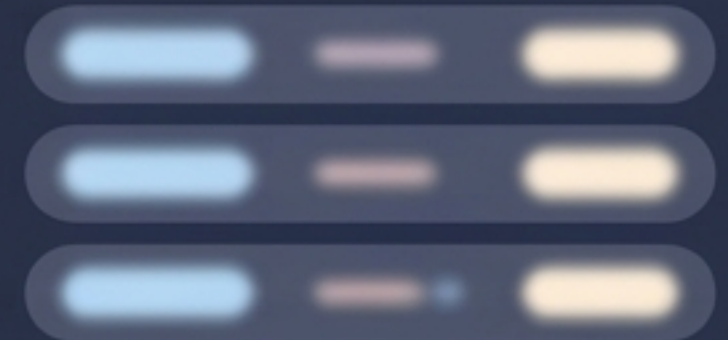

Daily Spend Chart
(UTC Fixed)

Trend lines to spot sudden spikes and system abuse.

Recent Transactions

Catch users generating 50 selfies an hour immediately.

Silent Maintenance: 4 AM pg_cron Cleanups

pg_cron runs daily at 4:00 AM UTC
(Off-peak for Asian timezones).

Raw messages
> 30 days old.

B-tree index on **created_at**
allows efficient batch deletes.
No full table scans.

No soft deletes.
No cold storage.

Memories are already extracted
by the LLM. The raw chats have
served their purpose. A
product that grows without
bound is a liability.
