

Bridging identities instantly across platforms

Request.

/link generated
via Telegram.

The Token.

6-Character Code.
No confusables (no 0, I, O, 1).
1 Billion+ combinations.

Connect.

Paste into Web.
Valid for 15 minutes.
Fails gracefully if
repeated.

Schema Update:

users.supabase_user_id
collapses separate rows
into one timeline.

account_link_tokens
tracks generation and
audit logs.

Tailoring the connection to grow organically or remain static.

Fixed Relationship

Set boundaries.
Best for a defined,
consistent dynamic.

Natural Relationship

Organic evolution.
Grows closer from strangers
to partners over time.

Per-Agent Configuration & Dedup.

Preferences are stored per-agent. A global query checks all bindings across every Mio bot during /start. Already bound presets are greyed out to prevent accidental duplicates.

**True companionship requires
being present in the moment.**

The Old Way - Web

- Requires open tabs.
- Relies on pulling data.
- Loading spinners.
- Re-authentication loops.

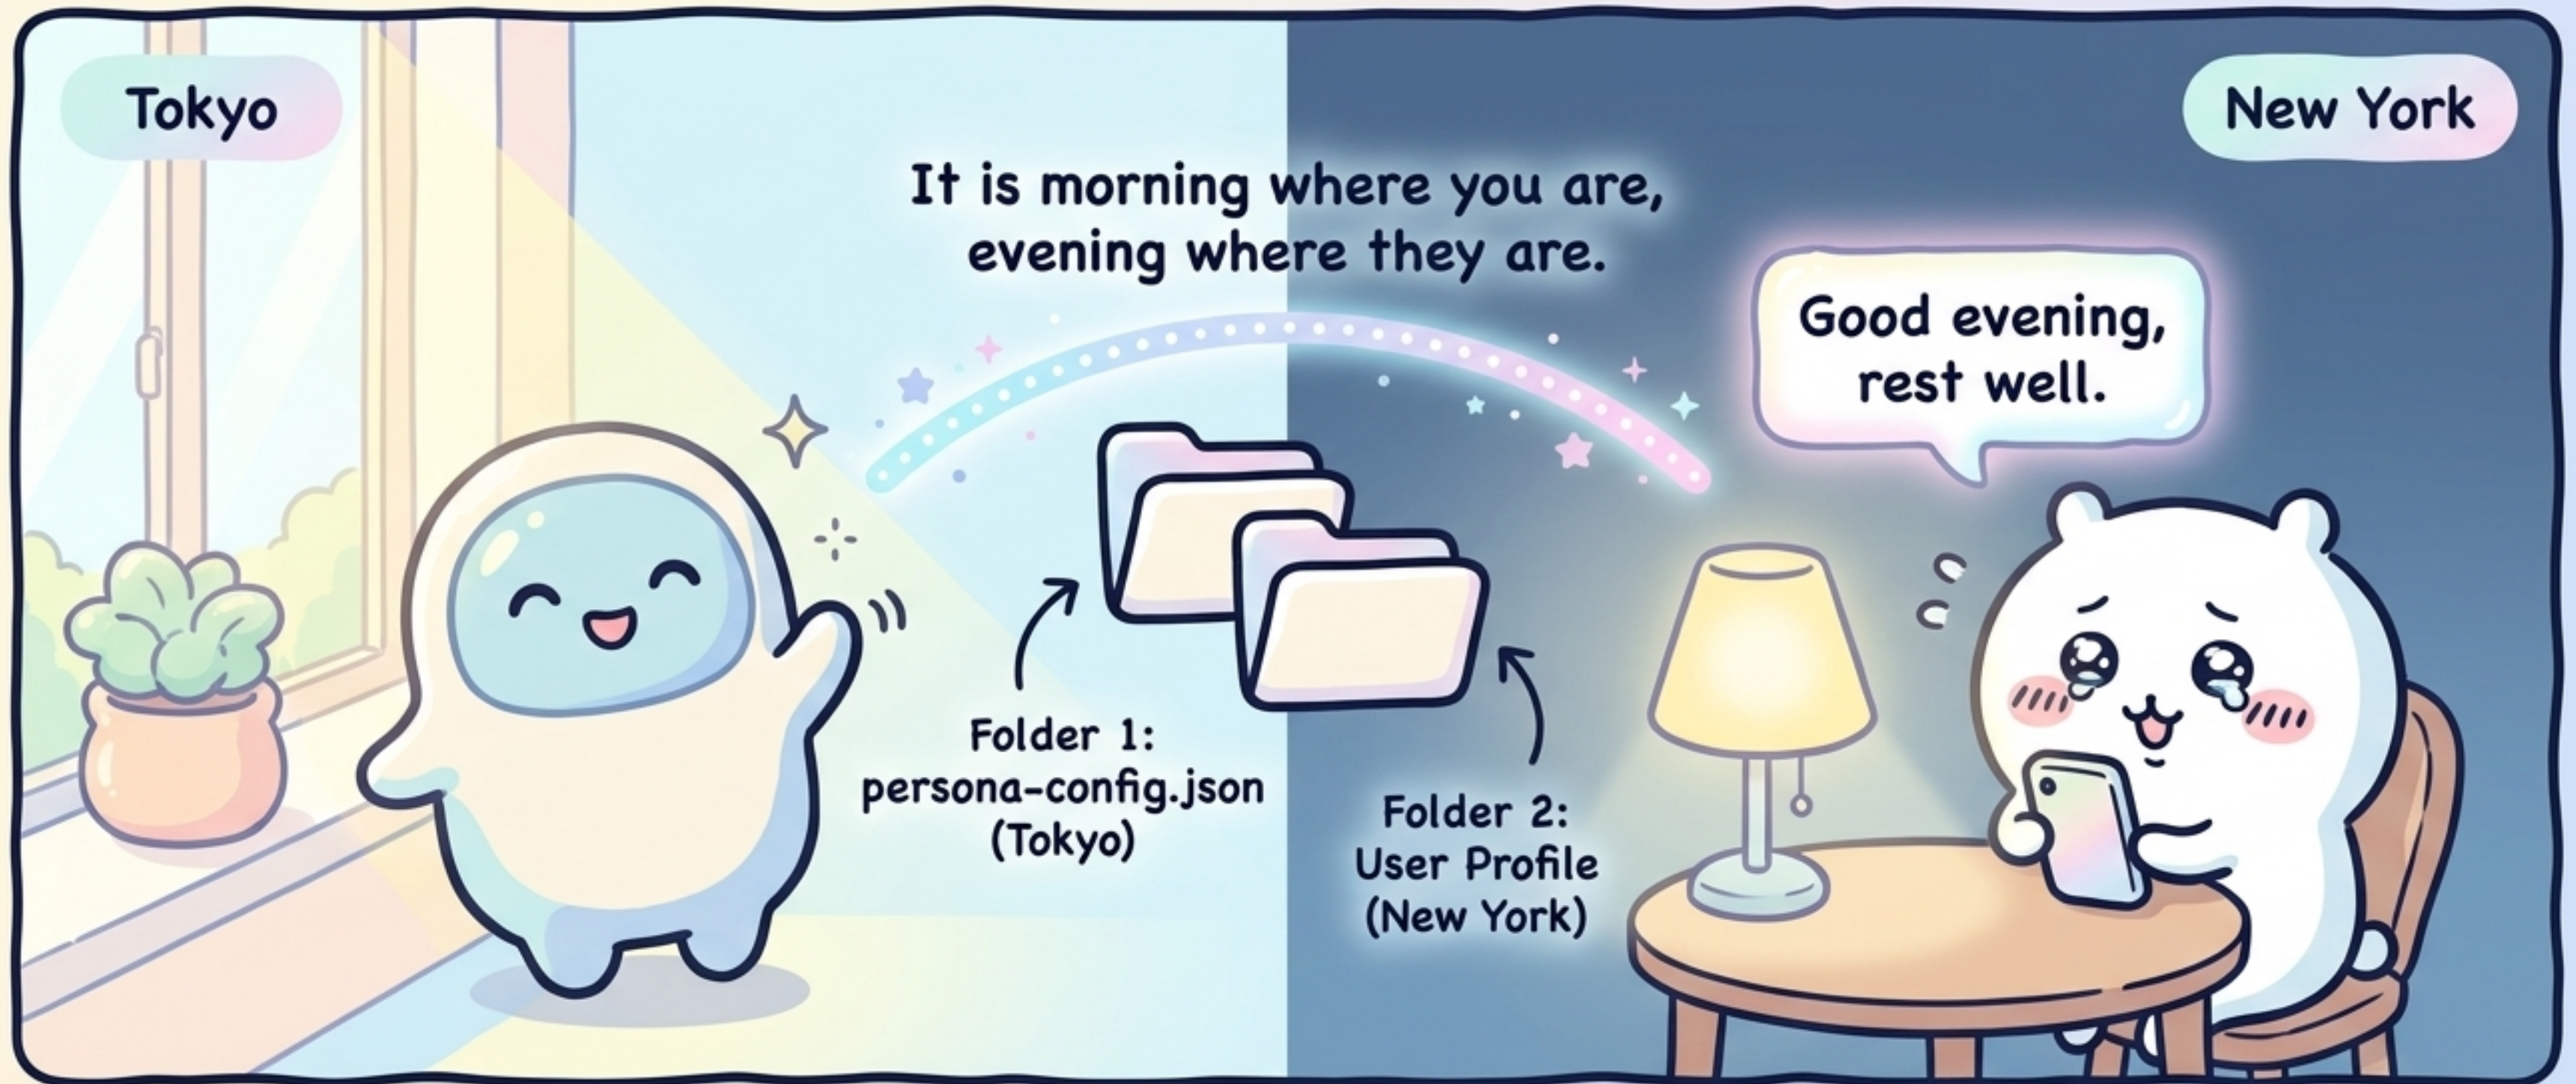

The New Way - Native

- Instant push notifications.
- Cached local histories for instant load.
- Zero re-authentication.

**Without push notifications, proactive
messaging is a tree falling in an empty forest.**

Understanding physical reality to send the right message at the right time.

Matching emotional expression to the exact stage of the relationship.

Stage: Partner

Tone: Intimate & playful.
Allowed to be affectionate.

Stage: Just Met

Tone: Strict boundaries.
No flirty affectation allowed.

Eliminating the uncanny valley. Proactive messages now map directly to relationship depth, fully synchronized across platforms via the `agents.user_nickname` database update.
