

Day 2: The 38-Commit CSS Restoration Hell

**38 commits just to fix what unifying the monorepo broke.
The pain of pixel-pushing paved the way for reusable architecture.**

Day 3: Surviving the WeChat Browser Labyrinth

Adding App #6 (MBTI) was easy. User-Agent sniffing was not.

PR #41 Alert:
Real devices exposed false negatives. Some WeChat versions embed completely undocumented UA strings.

Strictly Restricted

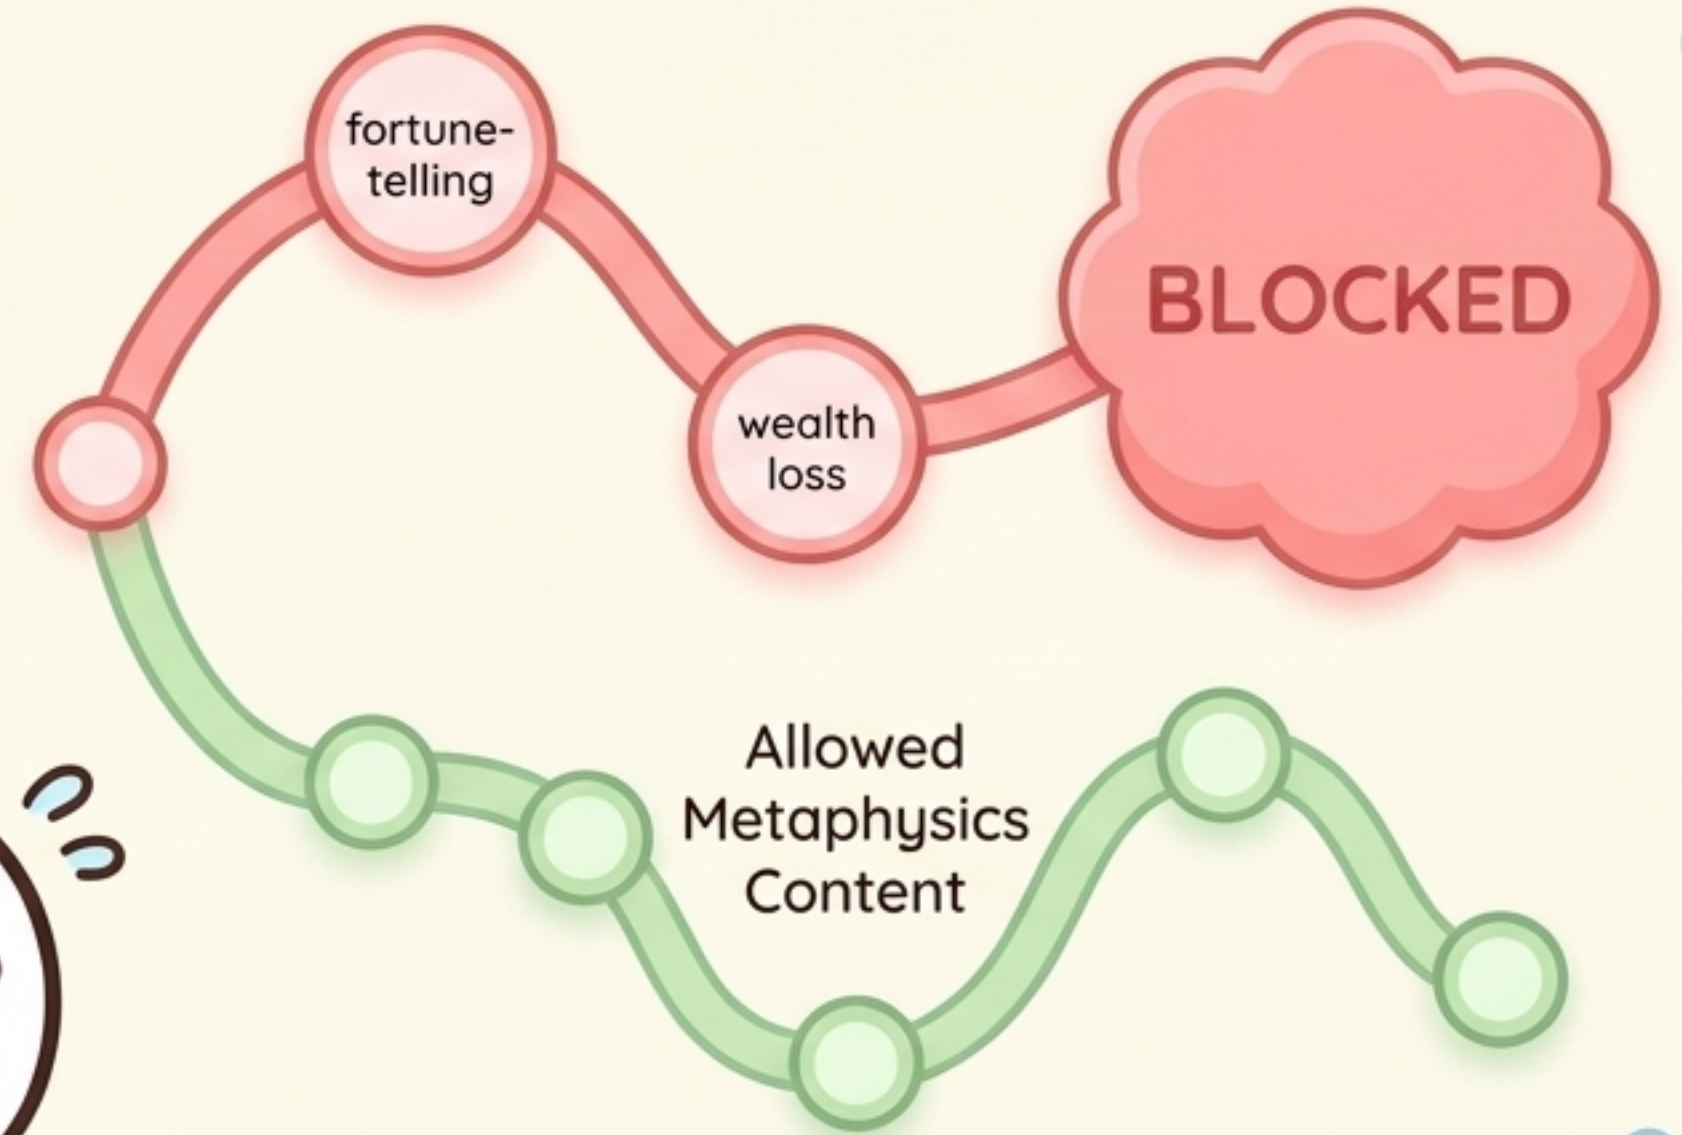

Day 4 (AM): The 1-Hour AI Migration Magic

What would have taken a full day of manual refactoring took 60 minutes. The biggest architectural win of the project.

Day 4 (PM): The Content Filter Trap

Why naive profanity filters ruin metaphysics apps.

Essential for China market compliance.
Sets the stage for PR #83 (Bilingual ToS
& GDPR compliance).

The 11 PM Victory: One Unified Platform

111 Commits. 3 Days. 5 separate apps transformed into 1 scalable platform.
