

Consolidating 5 Apps into 1 Monorepo

The **CSS Hell**: Unifying Tailwind tokens caused zero build errors, but triggered countless **2px visual regressions** requiring **38 manual commits** to fix.

Before

After

Turborepo: 4 Days of refactoring yielded a single source of truth.

The Dried Fish Economy & Seamless Auth

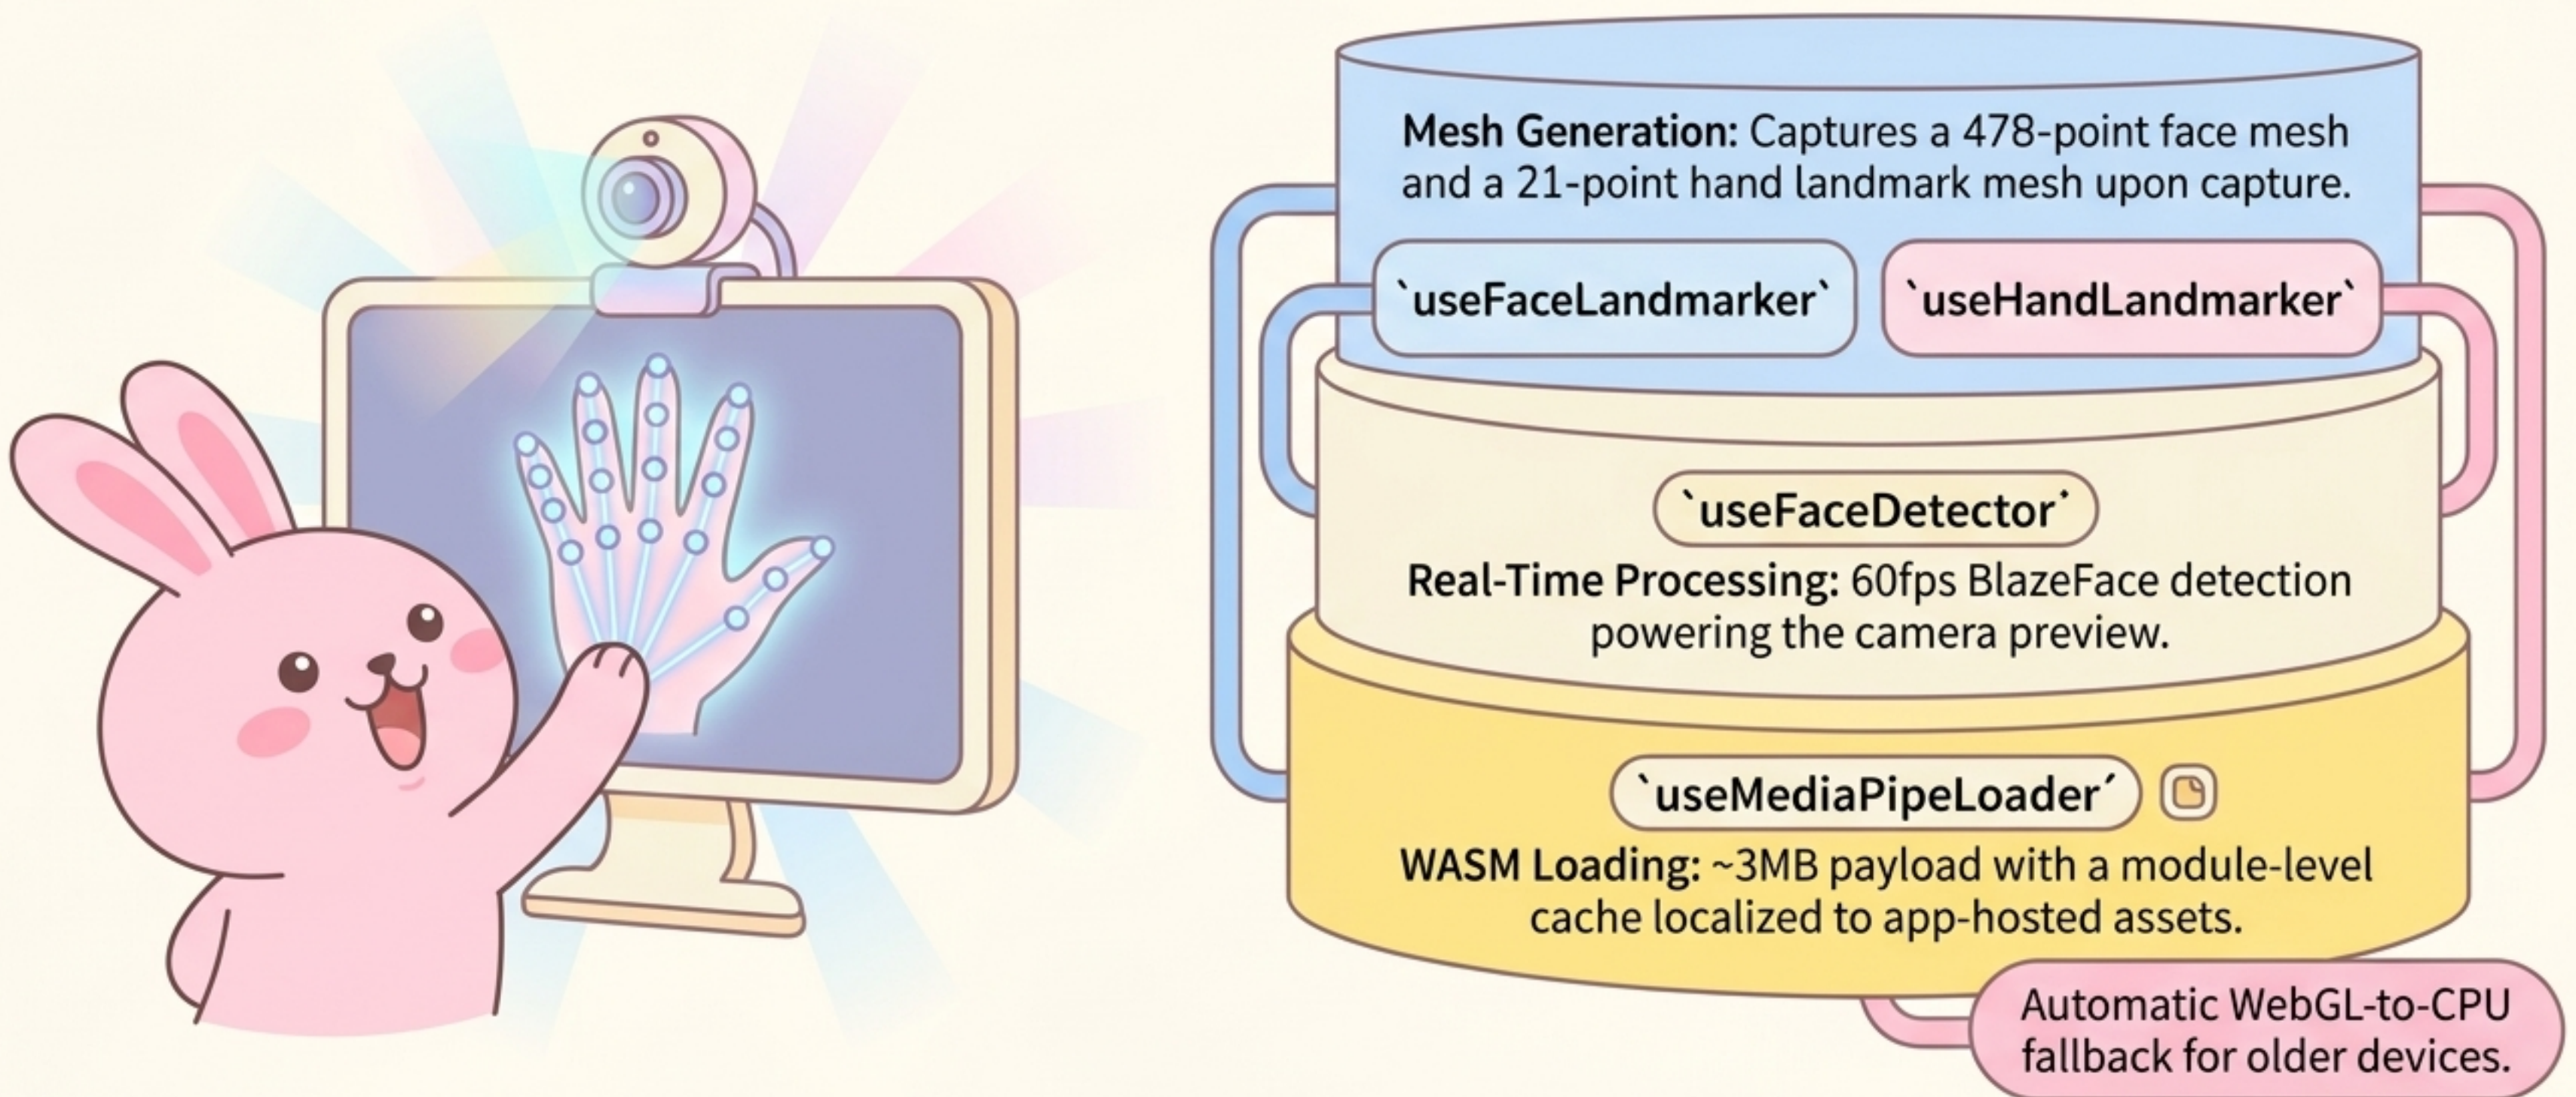

The Brand Abstraction: Replacing USD with “Dried Fish Treats.” Psychological friction drops when users spend 5 fish treats instead of a fiat currency amount.

Anonymous-to-Authenticated Merge

Zero-Latency Edge ML: Palm Reading in the Browser

Running MediaPipe locally means zero server round-trips for image detection, cutting costs and latency.

Calibrating AI Tone: Fixing the 'People-Pleasing' Default

The Problem: Default LLMs are people-pleasing and generically positive, breaking the authentic fortune-telling immersion.

V1 Default AI

V2 Calibrated AI

Overall Tone

Universally positive & encouraging.

Direct. Good is good; bad is explicitly pointed out.

Health Readings

Mixed, cautious analysis.

Neutral-to-negative bias with direct health warnings.

Negative Indicators

Softened or avoided entirely.

Blunt negative indicators followed immediately by structured mitigation strategies.

The AI Assist: Claude Code migrated 52 legacy API routes into a unified SSE streaming pattern (auth → deduction → model → stream) in exactly 1 hour of wall-clock time.

The Secret: Shared packages mean every new product vertical gets auth, credit economy, AI streaming, and DFA-based content filtering for free. The only marginal cost is prompt engineering.
