

You Already Own an AI Tracker

The Custom App Trap

The Invisible Pipeline

The best code is the code you don't write. Total infrastructure cost: Zero.

AI as the Glue Layer

The Platform Primitive

A decades-old macOS feature watches for new .m4a files.
No third-party cron or polling needed.

The AI Integrator

AI writes the integration. We just describe the delivery destination (Notes, Obsidian, Slack) in natural language.

An 850-line pipeline built in 30 minutes with 10 commits.
Adding a new delivery target takes minutes, not days.

One Call Does It All

The Old Way

Audio

Speech-to-Text

Raw Text

LLM

Output

Loses tone, emphasis,
and context during
text serialization.

Gemini Flash accepts audio natively
and outputs structured JSON. No
intermediate text. No information loss.
